**Question 15 – November 12**

Which type of choledochal cyst harbors the highest risk of malignancy?

A. Type I  
B. Type II  
C. Type III (choledochocele)  
D. Type V

**Answer: A**  
Type I and Type IV choledochal cysts carry the highest risk of malignancy and as such, surgical resection with creation of a Roux-en-Y hepaticojejunostomy is recommended in surgically fit patients.
