

Question 28 – February 13

Anorectal manometry can provide information regarding all of the following parameters, except:

- A. Anal resting sphincter pressure
- B. Length of the anal canal
- C. Sphincter defect
- D. Rectoanal inhibitory reflex
- E. Anal squeeze sphincter pressure

Answer: C

Anorectal manometry is a technique to assess function of the anorectal canal and its structures. It is not the test of choice for the assessment of anatomical defects or abnormalities.
